Overview

What is a Bess calculator & how does it work?

The new BESS calculator uses a proprietary model to balance maximizing returns over the asset lifetime with optimizing battery lifespan by accounting for critical battery specs and degradation parameters, such as depth of discharge (DoD), round-trip efficiency (RTE), and charge and discharge cycles.

What is enSights' Bess calculator?

enSights, an AI-powered, cloud-first clean energy optimization platform company, is launching its state-of-the-art BESS calculator to empower developers and asset owners to fully benefit from the massive energy storage sector by optimizing battery sizing for maximized financial returns based on energy market and grid support opportunities.

Why should you use a Bess battery calculator?

By replacing costly and labor-intensive BESS system design, the calculator instantaneously generates financial projections and recommends ideal battery size and operation modes to introduce economies of scale to battery deployment. Providing decision-making insights, the calculator presents straightforward visualizations of energy and cash flow.

What is a Bess system description?

A “BESS system description” is requested from each agency or subagency with information about each BESS system to provide a context of the system being evaluated and to provide benchmark values of efficiency and capacity to compare with the KPIs derived from the meter data. How much power can a Bess generate?

The BESS can bid 30 MW and 119 MWh of its capacity directly into the market

for energy arbitrage, while the rest is withheld for maintaining grid frequency during unexpected outages until other, slower generators can be brought online (AEMO 2018).

Can a Bess model be compared to a PV+Bess model?

However, with BESS any error in the charge and discharge of the battery tends to accumulate so in terms of hour-by-hour time series data, the model of a BESS or PV+BEES system status quickly deviates from the measurements, and an hour-by-hour comparison of model to measured values is not meaningful.
