ENERGY PROFILE British Virgin Islands

developing areas. Energy self-sufficiency has been defined as total primary energy production divided by total primary energy supply. Energy trade includes all commodities in Chapter 27 of the Harmonised System (HS). Capacity utilisation is calculated as annual generation divided by year-end capacity x 8,760h/year. Avoided

National Energy Transition Strategy Priorities Discussed

Cofounded by Amory Lovins in 1982, RMI has been a leader in energy efficiency and renewable energy for 35 years. RMI's Islands Energy Program accelerates the transition of island economies from a heavy dependence on fossil fuels to a mix of energy efficiency and renewables--and creates a blueprint for other isolated economies.

Energy Snapshot British Virgin Islands

Energy Snapshot British Virgin Islands This profile provides a snapshot of the energy landscape of the British Virgin Islands (BVI), one of three sets of the Virgin Island territories in an

archipelago making up the northern portion of the Lesser Antilles. The 2015 electricity rates for BVI are of \$0.16 to \$0.24 per kilowatt-

energy po

The British Virgin Islands (BVI), a British Overseas Territory of 59 square miles, consists of approximately 60 islands, cays and islets. The majority of its population lives on the four main islands of Anegada, Jost 1 Energy Policy Framework for the British Virgin Islands, provided by BVIEC to DNV GL on 22 April 2014 . ENERGY POLICY Page 3

energy po

environmental sustainability, the Government of the Virgin Islands has already taken steps to address these issues. Based on a 10-year energy vision developed in 2013 1, BVI has the following energy targets: o By 2023, supply 30% of the territory's energy by renewables means; o By 2021, fossil fuel imports decrease by 20%;
