Can I add additional solar panels to my existing solar system?

This means that additional solar panels can easily integrate into the existing solar system and solar monitoring process. However, if your solar system is older and incompatible with your desired expansions, you may choose to replace the system altogether or run a separate system alongside your solar panels.

Should I replace my solar system for an expansion?

However, if your solar system is older and incompatible with your desired expansions, you may choose to replace the system altogether or run a separate system alongside your solar panels. Do I need to stick with my original solar installer for an expansion?

.

Can I expand my SunPower solar system?

When you start the process of expanding your system, your provider will review your existing setup. SunPower solar systems are designed to last decades, so replacing an entire solar system in order to add additional solar panels is a rare occurrence.

Can I add more solar panels if my roof is old?

Do not add more solar panels to your system if your roof is old, it is a leased system, or if you do not have enough roof space for extra panels. Contact your original solar installer to add more panels to your system. Why add solar panels to an existing solar system?

.

Should I expand my solar panels?

Some common reasons to expand your solar panels are getting an electric vehicle, installing a battery, electrifying your home, or making home upgrades like an addition or a new pool. You may not know where to begin if you think you need more solar.

Should I hire a solar installer for an expansion?

It's best to hire your original solar installer for any upgrade to your system. They'll likely honor the initial warranties on your solar system after the upgrade. Changing installers for an expansion can void any current warranties on your system because the original installer can't verify the work of another contractor.
