Solar panel mounts are used to secure your solar panel array to a surface and can also be used to optimize your panel's energy production through its angle and direction. The type of solar panel mounts that would be required for an array is completely dependent on the specific surface of which the array is being attached.

Consider the roof type (material and slope), weatherproofing, installation convenience, and wind and snow loadings. Choose an appropriate racking and mounting system for the type of PV module, and install the system along with needed flashing and seals. See the Compliance Tab for related codes and standards requirements, and criteria to meet .

EcoFlow's rigid solar panels come with a EcoFlow Tilt Mount Bracket for easy rooftop installation. The components include four fixing brackets, two adjustable brackets, and screws. This should be all you need to mount rigid solar panels on the roof or any other flat surface on your home that receives direct sunlight.

Some of the most important questions for most installers and DIY solar enthusiasts concern mounting solar panels. There are many high-quality mounting solutions on the market, such as Unirac, IronRidge, PowerFab, Quickmount PV, Schletter, etc.
