- • • .

Vasilikos Power Station is the newest power plant of . Located between and and with an installed capacity of 640 MW, it was still under development prior to the of 11 July 2011. The first phase came online in the early 2000s and consists of two steam.

How high is a power station in Cyprus?

The flue gas stack of the power station is 138 metres (453 ft) high and is the second tallest structure in Cyprus. The explosion that severely damaged the power station was heard up to 50 kilometres (31 mi) away and is believed to have involved at least 2,000 tonnes of munitions.

Are there private power plants in Cyprus?

As a precondition to the accession of Cyprus to the European Union, the local market for electricity generation has been opened to private companies, but so far no private power plants have been built, although four licenses have been granted by Cyprus Energy Regulatory Authority.

Who founded the Electricity Authority of Cyprus?

The Electricity Authority of Cyprus (EAC) (Greek: Αρχή Ηλεκτρισμού Κύπρου (ΑΗΚ)) was founded in 1952 by the British colonial government. The 28 private

electricity companies of the time were nationalized and absorbed into the EAC. The Authority never received any subsidies from the government as these have always been prohibited by law.

Where is Dhekelia Power Station?

Dhekelia Power Station is one of three power plants belonging to the Electricity Authority of Cyprus. It is located approximately 15 kilometres (9.3 mi) east of the city of Larnaca and it has a capacity of 460 MW. The original plant was the first of the company, which started building it in the mid-1950s.

What technology is used to build a gas plant in Cyprus?

The Authority decided on the use of combined cycle technology for the fourth unit of the plant. It consists of two gas turbines by General Electric combined with one steam turbogenerator. The capacity of this unit reaches 220 MW. The unit came online using diesel fuel as a stopgap until a gas terminal is built in Cyprus.
