

## European Solar and Energy Storage Solutions

# Design specification requirements for household energy storage boxes

## Overview

---

As home energy storage systems become more common, learn how they are protected.

As home energy storage systems become more common, learn how they are protected.

energy storage technologies or needing to verify an installation's safety may be challenged in applying current CSRs to an energy storage system (ESS). This Compliance Guide (CG) is intended to help address the acceptability of the design and construction of stationary ESSs, their component parts and the siting, installation, commissioning.

This post covers system design and permitting considerations based on the latest editions of the International Fire Code (IFC) and the International Residential Code (IRC) including: ESS siting and size limits. Fire detection options, including siting ESS in an attached garage. Vehicle impact protection.

The purpose of this bulletin is to clarify specific requirements for residential energy storage systems (ESS) as defined under the 2021 IRC, specifically focusing on product safety standard listing, code required marking, and to clarify allowable locations.

This Solar + Storage Design & Installation Requirements document details the requirements and minimum criteria for a solar electric ("photovoltaic" or "PV") system ("System"), or Battery Energy Storage System ("battery" or "BESS") installed by a SolarWhat are the IRC requirements for energy storage systems?

There are other requirements in IRC Section R328 that are not within the scope of this bulletin. 2021 IRC Section R328.2 states: "Energy storage systems (ESS) shall be listed and labeled in accordance with UL 9540." UL 9540-16 is the product safety standard for Energy Storage Systems and Equipment referenced in Chapter 44 of the 2021 IRC.

Do energy storage systems need to be labeled?

2021 IRC Section R328.2 states: “Energy storage systems (ESS) shall be listed and labeled in accordance with UL 9540.” UL 9540-16 is the product safety standard for Energy Storage Systems and Equipment referenced in Chapter 44 of the 2021 IRC. The basic requirement for ESS marking is to be “labeled in accordance with UL 9540.”.

Do energy storage systems need a CSR?

Until existing model codes and standards are updated or new ones developed and then adopted, one seeking to deploy energy storage technologies or needing to verify an installation’s safety may be challenged in applying current CSRs to an energy storage system (ESS).

What is energy storage system installation review and approval?

**4.0 Energy Storage System Installation Review and Approval** The purpose of this chapter is to provide a high-level overview of what is involved in documenting or validating the safety of an ESS as installed in, on, or adjacent to buildings or facilities.

What is the new NEC Article 706 energy storage system?

The 2017 NEC is likely to replace references to ESS installation in Article 480 and has proposed a new Article 706 Energy Storage Systems that consider the application of electrochemical energy storage along with other types of energy storage that are referenced in other Articles within the code (e.g., PV, Wind, etc.).

Do electric energy storage systems need to be tested?

It is recognized that electric energy storage equipment or systems can be a single device providing all required functions or an assembly of components, each having limited functions. Components having limited functions shall be tested for those functions in accordance with this standard.
