Overview

How much energy does Ecuador use?

In 2021, the country consumed 21 thousand short tons,¹⁵ which it imported primarily from the United States, followed by Peru. Ecuador relied heavily on fossil fuel (which include oil, natural gas, and coal) production for power generation a decade ago, with fossil fuel-powered plants accounting for about 43% of total energy production in 2011.

Is there a potential for electricity generation in Ecuador?

Based on what has been described, it is identified that there is a high potential for electricity generation in Ecuador, especially the types of projects and specific places to start them up by the central state and radicalize the energy transition.

Does Ecuador have an electricity market?

In this research, an analysis of the electricity market in Ecuador is carried out, a portfolio of projects by source is presented, which are structured in maps with a view to an energy transition according to the official data provided.

What is the main source of energy in Ecuador?

Petroleum and other liquids continue to be Ecuador's primary source of energy; crude oil accounted for 63.4% of total energy consumption in 2021. The country has significant oil reserves and is one of South America's top oil producers.

Who uses natural gas in Ecuador?

Natural gas in Ecuador is mostly used by the industry sector¹. Hydropower in Ecuador is a significant source of electricity generation given the country's geographical features, such as the Andes Mountains and the Amazon rainforest. Hydropower accounted for 79.1% of total electricity generation in 2021, up from 55.4% in 2011.² Figure 1.

How has Ecuador's energy consumption changed over the years?

Ecuador's energy production increased by a compounded growth rate of 0.5% per year from 2011 to 2021, and renewables accounted for most of the increase. The country's energy consumption also increased by a compounded growth rate of 0.5% per year over the same period, down from 4.9% per year the decade prior.
