Eiry energy Burundi

Overview

Energy in is a growing with tremendous potential. As of 2020 , Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries. Its most important power source is hydroelectric power, representing 95% of total pro.

The Burundi Ministry of Energy and Mines also known as the Ministry of Hydraulics, Energy and Mines is responsible for managing energy development and distribution in Burundi. The main function of the Ministry of Energy and Mines include: design and implement the National policy in energy, geology and Mines; promote geological research and mining industry activities; developin.

Who is responsible for energy development in Burundi?

MSc. Claudine SHURWERYIMANA The Burundi Ministry of Energy and Mines also known as the Ministry of Hydraulics, Energy and Mines is responsible for managing energy development and distribution in Burundi.

How much energy does Burundi use?

Energy in Burundi is a growing industry with tremendous potential. As of 2020, Burundi consumes a total of 382.70 million kilowatt hours (kWh) of electric energy per year. The country produces locally 69% of the electricity it consumes, with the rest imported from other countries.

What is Eiry energy?

A Backup Power solution for uninterrupted electricity. Eiry energy systems will get you through power failures with a seamless, 100% automated, backup power supply without any noise or petrol fumes. Combining solar energy with the PowerPack's excellent Swiss design will give you the power you need for your home or business.

What are the energy planning strategies for Burundi?

Energy Planning Strategies for Burundi The Burundian energy supply highly

depends on traditional use of biomass. The literature shows that the power supply of this country mainly relies on hydropower generation. Many hydropower projects are under development to increase the electricity access of this country .

What is Burundi's main energy source?

Its most important power source is hydroelectric power, representing 95% of total production. It also uses energy from other renewable (wind, solar, biomass, and geothermal) and coal power plants. Burundi has the world's lowest carbon footprint per capita at 0.027 tons per capita in CO₂ emissions as of 2019.

What will become the Burundian power sector in long-run?

Although the country is endowed with a huge potential for various energy resources , there is higher uncertainty about what will become the Burundian power sector in long-run. This uncertainty is higher as the target of reaching 30% of electrification rate in 2030 is still far from the current situation (Fig. 2).
