Energy Storage System Certificate

Overview

Large batteries present unique safety considerations, because they contain high levels of energy. Additionally, they may utilize hazardous materials and moving parts. We work hand in hand with system integrators and OEMs to better understand and address these issues.

UL 9540, the Standard for Energy Storage Systems and Equipment, is the standard for safety of energy storage systems, which includes electrical, electrochemical, mechanical and other types of energy storage technologies for.

We also offer performance and reliability testing, including capacity claims, charge and discharge cycling, overcharge abilities, environmental and altitude simulation, and combined temperature cycling and vibration.

We conduct custom research to help identify and address the unique performance and safety issues associated with large energy storage systems. Research offerings include: .

Depending on the applicability of the system, there will be different standards to fulfill for getting the products into the different installations and Markets. Depending on the area of Europe to install the product: 1. CE.

Who can benefit from energy storage testing & certification services?

We provide a range of energy storage testing and certification services. These services benefit end users, such as electrical utility companies and commercial businesses, producers of energy storage systems, and supply chain companies that provide components and systems, such as inverters, solar panels, and batteries, to producers.

What is ESS battery testing & certification?
