Overview

What is the distributed energy show?

The show incorporates the UK's leading flexible energy event The Distributed Energy Show and The Energy Storage Show which is set to be the UK's largest gathering of its type. The Distributed Energy Show is established as the UK's leading event for flexible, decentralised energy systems.

What is energy storage & how does it work?

As installations of wind turbines and solar panels increase — especially in China — energy storage is certain to grow rapidly. They are part of the arsenal of clean energy technologies that will enable a net zero emissions future. Without them, the world will never be able to move away from fossil fuels entirely. How does it work?

.

What is the future of energy storage?

Storage enables electricity systems to remain in balance despite variations in wind and solar availability, allowing for cost-effective deep decarbonization while maintaining reliability. The Future of Energy Storage report is an essential analysis of this key component in decarbonizing our energy infrastructure and combating climate change.

Are batteries the future of energy storage?

Batteries offer one solution because they can quickly store and dispatch energy. As installations of wind turbines and solar panels increase — especially in China — energy storage is certain to grow rapidly. They are part of the arsenal of clean energy technologies that will enable a net zero emissions future.

Who makes energy storage batteries?

Chinese battery companies BYD, CATL and EVE Energy are the three largest producers of energy storage batteries, especially the cheaper LFP batteries. This month Rolls-Royce signed a deal with CATL to help deploy the company's batteries in the EU and the UK.

Should energy storage be co-optimized?

Storage should be co-optimized with clean generation, transmission systems, and strategies to reward consumers for making their electricity use more flexible. Goals that aim for zero emissions are more complex and expensive than net-zero goals that use negative emissions technologies to achieve a reduction of 100%.
