# Flat roof photovoltaic panel water guide groove for waterproofing

## Overview

---

Can a flat roof be waterproofed?

Most of these membrane systems can be used to waterproof both flat and pitched roof structures. A flat roof is classified as having a pitch of 10 degrees or less whilst a pitched roof has a pitch of 11 degrees or more. There are many different types of flat roof construction, but the three main ones are as follows;

How do you waterproof a flat roof?

Joints are made by heating the underside either with a gas torch or hot air gun. Liquid applied membranes – a liquid system that is applied to the roof area and cures to form a waterproof membrane. Most of these membrane systems can be used to waterproof both flat and pitched roof structures.

Does the sika® solarmount-1 system require roof membrane penetrations?

The installation of the Sika® SolarMount-1 system does not require any roof membrane penetrations. The Sika® SolarClick fasteners are welded to the membrane with standard Sika Sarnafil equipment. There are only a limited number of components to be assembled on site – this allows fast and easy installation.

Does a flat roof have a TPO membrane?

Therefore, flat roofs equipped with a TPO membrane store less heat. This solution can be used to counteract the heat island effect, particularly in urban areas. TPO is free of plasticizers, halogenated flame retardants and all other toxic components. In fact, there is virtually no environmental impact during its manufacture or use.

Can a roof waterproofing system be installed without a membrane?

The system can be placed without penetration of the roof waterproofing membrane. Integrated cable channels, stackable components and the

requirement for only a few tools, considerably reduces the working time on the roof.

Why is TPO a good waterproofing solution for a flat roof?

A number of advantages make the TPO membrane one of the best solutions for waterproofing flat roofs of eco-responsible buildings. The energy balance of the building is therefore retained due to the light colour of TPO, its long service life and its excellent resistance to ultraviolet radiation and ozone.
