# GCL multicrystalline single glass photovoltaic panel price

## Overview

---

IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film a-Si/u-Si or Global Price Index (from Q4 2013)'.

As of now, GCL's n-type photovoltaic module production capacity is nearly 30GW. • The 210mm and 182mm large-size n-type TOPCon single-glass and double-glass modules have passed TÜV Rheinland certification.

In 2019, typical 72-cell multicrystalline modules were rated at 320–350 W, whereas monocrystalline modules with half-cut cells were rated at 430–440 W. These trends may help explain the projected monocrystalline market share growing from 60% in 2019 to almost 90% by 2025 (ITRPV Working Group 2019).

How much does a monocrystalline PERC cell conversion cost?  
[View more](#)

The total cost for monocrystalline PERC cell conversion (not including the cost of wafers) comes to \$0.049/W. Figure 9 provides the results of our cost model

for each monocrystalline PERC module assembly step, based on an urban China manufacturing facility that produces more than 1 GW per year.

How much LCOE does a solar PV system have?

Utility PV systems were benchmarked to have an LCOE of approximately 5 cents/kWh in 2020 (Feldman, Ramasamy et al. 2021). To achieve the 2030 SunShot goal, the lifetime economics of PV systems must be improved across multiple dimensions.

Why are PV modules cheaper than cell MSPs?

The relative price differences among the different PV technologies are less pronounced for module MSPs than for cell MSPs, because the higher-efficiency technologies require less module material per watt. Assumptions include manufacturing of 72-cell modules in urban China, not including tariffs.

Where can I find a report on photovoltaic modules?

This report is available at no cost from the National Renewable Energy Laboratory (NREL) at Smith, Brittany L., Michael Woodhouse, Kelsey A. W. Horowitz, Timothy J. Silverman, Jarett Zuboy, and Robert M. Margolis. 2021. Photovoltaic (PV) Module Technologies: 2020 Benchmark Costs and Technology Evolution Framework Results.

How much does a monolithic module cost?

6 modules having a 2.47-m<sup>2</sup> total area. This is allocated across the equipment for buffer and absorber layers (\$0.08–\$0.09/W), back contact (\$0.11–\$0.12/W), monolithic integration (\$0.02–\$0.03/W), and final module assembly (\$0.04–\$0.05/W). 7-year depreciation assuming the same useful lifetime.
