Overview

How can community-based landscape management improve climate resilience in Timor-Leste?

Enhancing Early Warning Systems to build greater resilience to hydro-meteorological hazards in Timor-Leste Community-based Landscape Management for Enhanced Climate Resilience and Reduction of Deforestation in Critical Water. Safeguarding rural communities and their physical and economic assets from climate induced disasters in Timor-Leste.

Is there a market for roof-top solar energy systems in Timor-Leste?

Australia's Market Development Facility (MDF) and ITP Renewables conducted an assessment of the potential market for roof-top solar energy systems in Timor-Leste.

How long does a solar system last in Timor-Leste?

High electricity costs and readily available solar radiation mean that the average payback period for a rooftop photovoltaic (PV) solar energy system in Timor-Leste is only 1.5 to 3 years instead of the global average of 6-10 years. Transitioning to solar can also help the country meet environmental commitments.

Does Timor-Leste have electricity?

Timor-Leste has rapidly expanded electricity access to more than 83 per cent of the population but the country has yet to achieve energy security.¹ Consumer costs, even with government subsidy, remain high and outages are common. In addition, most of Timor-Leste's electricity is generated through costly and polluting diesel generators.

What is happening in Timor-Leste?

The message was clear—without the right data, lives are at risk. Efforts are now underway in Timor-Leste to close this gap. As part of the UNEP initiative,

nine Automatic Weather Stations, two Automated Meteorological Observation systems, three radars and a marine buoy are being installed across the country.
