## Overview

---

The truth to why going solar costs as much as it does is that solar panels are not a stand-alone solution — they need a range of other components to function properly, including inverters, wiring, .

The truth to why going solar costs as much as it does is that solar panels are not a stand-alone solution — they need a range of other components to function properly, including inverters, wiring, .

Disadvantages of solar energy  
Upfront costs The panels, inverter (which converts the sun's power into usable electricity), solar batteries for storing power, wiring and labor for a five-kilowatt (kW) residential system may cost anywhere from \$10,000 to \$25,000 or more.  
Not every roof will work .  
Potential property tax increase .  
Solar storage expense .  
Is solar too expensive?

Myth #3: Solar is too expensive. While the cost of a residential solar system can range from \$15,000 to \$35,000, you don't have to pay for it all at the time of installation. There are several solar financing options that allow you to pay over time, plus local, state, and federal tax incentives and rebates to offset the costs.

Why do solar panels cost so much?

However, the upfront cost of installing solar panels can discourage many homeowners. The truth to why going solar costs as much as it does is that solar panels are not a stand-alone solution — they need a range of other components to function properly, including inverters, wiring, mounting hardware, batteries and other equipment.

How much does it cost to install solar panels?

According to our solar experts, solar panels cost about \$19,000 to install in the United States, on average. While the price tag seems steep, incentives and payment options help make the cost of going solar easier to manage. The total cost of a solar installation depends on your location, energy usage, and

even the type of equipment you use!.

What are the hard costs of a solar system?

The hard costs — or hardware costs — of solar include the price of the solar panels, inverters, mounting equipment and wiring, as well as supply chain costs. A 2021 study by the National Renewable Energy Laboratory (NREL) found that hard costs account for 44% of the total costs of a home solar system.

Are solar panels worth it?

Solar panels can generate major savings if you're trying to reduce your electricity costs, carbon emissions or both. The primary factor in determining whether or not solar panels are worthwhile for you is the cost you're currently paying for electricity. The higher your electricity costs, the more a solar panel system will save you in the long run.

How much does home solar cost?

The average pre-incentive cost of home solar is \$29,161 for a three-bedroom house, or \$20,412 after claiming the 30% tax credit. However, as shown in the chart below, the number of bedrooms isn't a great indicator of the size and cost of a solar system – and neither is living space, for that matter.
