Overview

If you're installing a large commercial solar panel system, expect the installation to take anywhere from a week to a couple of months.

If you're installing a large commercial solar panel system, expect the installation to take anywhere from a week to a couple of months.

On average, the entire solar panel process will take between 3 months and 6 months to be completed from start to finish.

While solar panels can be installed in just a few hours, the entire solar installation process can actually take anywhere from two to six months.

The installation process for residential solar panels can range from 2 to 4 months. How long does a solar panel installation take?

A study from the National Renewable Energy Laboratory (NREL) found that it typically takes one to two weeks after the installation dates to officially receive permission to operate (PTO). The best way to make sure you'll finish your solar panel installation as soon as possible is to work with a competent, reputable solar installer.

How long does it take to approve a solar panel system?

Similar to the approval process, the amount of time it will take for a utility company to approve a solar panel system interconnection will vary by utility. A study from the National Renewable Energy Laboratory (NREL) found that it typically takes one to two weeks after the installation dates to officially receive permission to operate (PTO).

How long does it take for solar panels to pay back?

The amount of time it takes for the energy savings to exceed the cost of installing solar panels is known as the payback period or break-even period. A typical payback period for residential solar is 7-10 years, although it varies depending on your utility rates, incentives, system size, and other factors.

How soon can a solar company schedule my installation?

How soon a solar company can schedule your installation after receiving a signed contract varies from company to company; some solar companies have more crews and install much higher volumes than others. However, even companies with several installation crews may have a busy calendar.

Should I upgrade my solar panels before installation?

The more common upgrades include re-roofing, upgrading your electric panel, or reinforcing your roof to ensure it can withstand the additional weight of solar equipment. If upgrades are necessary prior to installation, it can mean further delaying a solar panel installation.

How much does a solar installation cost?

For example, let's assume your solar installation costs \$20,948 after incentives (the average cost on EnergySage). If you spend about \$2,800 annually, or \$233 monthly, on electricity, you'll break even on your solar investment in 7.5 years ($\$20,948/\$2,800 = 7.5$).
