How to connect the photovoltaic panel interface in parallel

Overview

How to Wire Solar Panels in Parallel Place the panels close to each other and oriented to the sun at the same angle Check that the panels do not shade each other and that they are far from possible causes of shading Choose an appropriate section of the electrical cable according to the distance of the panels Use junction boxes to neatly wire the panel terminals together.

How to Wire Solar Panels in Parallel Place the panels close to each other and oriented to the sun at the same angle Check that the panels do not shade each other and that they are far from possible causes of shading Choose an appropriate section of the electrical cable according to the distance of the panels Use junction boxes to neatly wire the panel terminals together.

To wire solar panels in parallel, connect each panel's positive terminals together. You also connect all the negative terminals to one another.

Parallel On solar panels, distinguish between the positive and negative wires. Lay the solar panels horizontally. Join the negative cable from the second solar panel to the positive wire from the first solar panel. Connect the solar panels to the solar charge controller.
