Installing a heating, ventilation, and air conditioning (HVAC) system in a shipping container means cutting and framing an equivalent-sized hole in the steel walls. So, if the container's PTAC needs replacing, you can easily replace the unit by sliding the old one out and the new one in.

Thermal Energy Storage (TES) for space cooling, also known as cool storage, chill storage, or cool thermal storage, is a cost saving technique for allowing energy-intensive, electrically driven cooling equipment to be predominantly operated during off-peak hours when electricity rates are lower.

In the case of storage in batteries the containers are mechanically adapted to integrate the air conditioning equipment that allows energy storage according to the project. These solutions provide greater flexibility and robustness to renewable power production systems. Tel: +359 02 92 92 92 92 Offshore Containers Email: sales@tls-containers.com +359 .

These BESS containers store energy for later use, making it crucial to optimize their setup for maximum efficiency and longevity. One critical aspect of setting up a BESS container is the installation of racks and air ducts, which ensure the proper functioning and cooling of the battery system.
