Some common systems used to lift solar panels onto your roof include mounting brackets, scaffolding, solar panel pulley systems, and ladder systems. All of these systems can be employed to safely and securely lift your solar panels onto your roof with minimal risk of injury or damage.

The Solmetric Module Lift is designed to safely and quickly transport a PV module to a roof. The device uses your existing fiberglass Werner or Louisville extension ladder. A pulley system is attached to the top of the ladder. A patented module “hook” attaches to the edge of a PV module frame and prevents lateral sliding of the module in .

Shows an improvised two-pulley system being used (by amateurs) to lift solar panels onto a roof.

I finished installing my DIY solar system grid tie 7.1KW on th end of 2019, but I want to share with you guys the methods I used to lift the panels to the roof. For the first 16 panels I run a steel cable between two tall trees over the top of the house. Used a pulley system to lift it and move the panel to the roof.
