# How to generate solar power on rooftops

## Overview

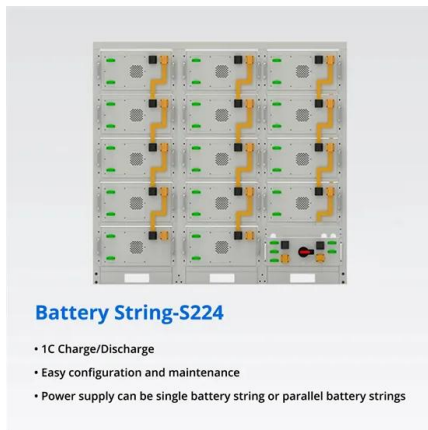

---

There are three main types of photovoltaic systems that can be used on flat or low slope roofs: Penetrating system: solar panels are installed on a mounting system that penetrates the roofing membrane. Non-penetrating system: solar panels are mounted on a rack support system that is installed on top of the membrane without anchoring, and is held in place using ballast. Laminates: photovoltaic strips are adhered over the roofing membrane.
