How to install photovoltaic panels on pallets

Overview

To embark on the journey of installing solar panels on a pallet, one must first grasp the underlying principles of structure and stability. Pallets are generally made from wood or plastic; however, choosing the right material is pivotal for ensuring longevity and safety.

To embark on the journey of installing solar panels on a pallet, one must first grasp the underlying principles of structure and stability. Pallets are generally made from wood or plastic; however, choosing the right material is pivotal for ensuring longevity and safety.

This Installation Manual contains essential information for electrical and mechanical installation that you must know before handling, installing JA Solar Modules. This Manual also contains safety.

When unpacking and staging, place pallets in a flat, open and dry location. While unpacking, position pallets next to a solid, self-standing support structure. Do NOT support the pallet with sharp objects or loose materials. Review the Installation Manual for LONGi Solar PV Modules before you begin installation.

- Store pallets of modules on a levelled surface, in a dry and controlled environment.
- Pallets are not weatherproof, and modules are not meant to be exposed to weather elements until installed.
- Store modules where objects will not fall onto them.
- Stack only 2 pallets high maximum, and never put any other materials on top of them.

Installation should be performed only by qualified personnel. All modules come with a permanently attached junction box and #12 AWG wire terminated in connectors.

How to install photovoltaic panels on pallets

Solar Panel Sizes, Dimensions & Weight

For one thing, solar panel sizes or dimensions, measured in height by width, will determine exactly how many panels can fit on the roof space you have available. And how many panels you can install directly affects the ...
