How to lay photovoltaic panels on the roof

Overview

Before you begin the installation process, properly plan your solar panel system. This involves assessing your roof's suitability, determining the number of panels you need, and obtaining the necessary permits.

The first step in the physical installation process is securing the roof attachments supporting the solar panels. First, the installer will find the rafters beneath your roof shingles. They'll either use a stud finder or measure from the.

With the stanchions in place, the next step is installing the racking to support the solar panels. Trethewey and Warda use aluminum rails for their project, securing them to the stanchions.

With the mounting system and electrical components in place, Trethewey and Warda install the solar panels. Each panel is bulky and heavy, so lifting them onto the roof is often a two-person job. Once each panel is in place.

Before the panels can go on, their electrical conduit and wiring must be in place. A licensed electrician is often the one doing this work. First, Warda runs conduit from the roof to the home's main electrical panel according.

Instructions for Installing Solar Panels on Roofs
Step 1: Lay out the installation materials you need. Step 2: Determine where the stanchions go. Step 3: Fasten the screws to the roof. Step 4: Tightly put the screws in the holes and secure them. Step 5: Gauge the distance from the rails. Step 6: Install the middle rail. Step 7: Bring power to the solar panels. □□□□.
