Fluke suggests using a multimeter, clamp meter, or I-V curve tracer to check the voltage and current of each module.

Fluke suggests using a multimeter, clamp meter, or I-V curve tracer to check the voltage and current of each module.

Following these steps carefully will allow you to diagnose any issues and ensure your system is functioning properly: Turn off the solar panel system and disconnect it from the inverter. Set your multimeter to measure DC voltage. Measure the short-circuit current (Isc) by placing the red probe on the positive terminal and the black probe on the negative terminal. Check for continuity by setting your multimeter to the resistance setting. □□□□
