# How to protect all-glass photovoltaic panels from rain

## Overview

---

The first step to protecting solar panels in a hailstorm is to buy resilient panels. The materials that go into a solar panel's manufacture determine its durability. While most panels produced today are relatively tough, panels rated UL 61730 go through testing to withstand strikes of hail between one and three inches, traveling at.

When a hailstorm is in the forecast, you can cover your panels to prevent damage. A hard shell covering provides the best protection against impact. Hard Cases protect the panels completely, taking the full force of hail stones or.

Methacrylate is a relatively inexpensive spray-on monomer that you can use to protect your panels. It has an advantage over hardcovers in that.

One of the keys to keeping your solar system working at peak efficiency happens during installation. An expert installer can help ensure the angles are correct for maximum.

A wire gauge mesh around the panels can provide a rigid covering that prevents hail from hitting the panel directly. This approach also lets sunlight.

8 Ways to Protect Solar Panels From a Hailstorm  
1. Buy Panels Rated UL 61730, UIC 61730, or IP68 . 2. Use Protective Covers . 3. Spray on a Methacrylate Layer . 4. Protect the Panels with Wire Mesh . 5. Adjust the Angles of Your Panels . 6. Inspect Your Panels Regularly . 7. Check Your Homeowner's Insurance Policy . 8. Follow the Weather Forecast .

8 Ways to Protect Solar Panels From a Hailstorm  
1. Buy Panels Rated UL 61730, UIC 61730, or IP68 . 2. Use Protective Covers . 3. Spray on a Methacrylate Layer . 4. Protect the Panels with Wire Mesh . 5. Adjust the Angles of Your Panels . 6. Inspect Your Panels Regularly .

8 Ways to Protect Solar Panels From a Hailstorm. The beginning point of your solar energy system is the photovoltaic (PV) panels. PV panels sit exposed on your roof or elsewhere unobstructed to collect sunlight and convert it into electricity.

Solar Shield ® is a nano scale transparent polymer coating designed to protect glass solar panels. It stops the adhesion of soil, grime, pollution, acid rain & other contaminants allowing your panels to produce at optimum efficiency. Rain alone will not keep solar panels clean and prevent soiling or etching.

Solar panels will work if they are covered in a clear cover such as plastic or plexiglass. Solar panels use roughly 4% of UV light, 43% visible light, and 53% infrared light, and certain plastics can block some of that light which makes your panels less efficient.

Solar panel covers protect solar panels during extended periods of inactivity, preventing damage, algae growth, and keeping birds and pests out. Some covers are designed to prevent energy overload by blocking solar energy absorption during non-use periods.
