libbi is an energy storage system that enables surplus energy produced by a PV array, or other renewable generation, to be stored for a home's future use, instead of being exported back out to the grid. It can also be installed in homes where no generation is installed, to maximise the benefits of off-peak Time of Use Tariff prices.

In this video we show you from start to finish how to install a MyEnergi Libbi battery system in the real world. Jordan shares all his tips and tricks for in.

Libbi has been developed to work in harmony with our existing products, connecting your home battery storage to our energy eco-system. Using the intuitive preferences in our mobile app, you can control when libbi will drain to your zappi, eddi and home, enabling you to make decisions on how you want to use your stored electricity.

In practice, battery storage systems can operate in a number of different ways. It is important to discuss your needs with your Clean Energy Council Accredited Designer when choosing a system. A battery storage system connects to a house in two main ways - DC (direct current) coupled or AC (alternating current) coupled.
