

European Solar and Energy Storage Solutions

Hungary civitas green energy

**Efficient
Higher Revenue**

- Max. Efficiency 97.5%
- Max. PV Input Voltage 600V
- 150% Peak Output Power
- 2 MPP Trackers, 150% DC Input Oversizing
- Max. PV Input Current 16A, Compatible with High Power Modules

**Intelligent
Simple O&M**

- IP66 Protection Degree: support outdoor installation
- Smart I-V Curve Diagnosis Function: locate PV string faults accurately and automatically detect faults
- DC & AC Type II SPD: prevent lightning damage
- Battery Reverse Connection Protection

**Flexible
Abundant Configuration**

- Plug & Play, EPS Switching Under 10ms
- Compatible with Lead-acid and Lithium Batteries
- Max. 6 units Inverters Parallel
- AFCI Function (Optional): when an arc-fault is detected the inverter immediately stops operation

Overview

Does Hungary have a commitment to renewables?

Attila Steiner, Hungary's State Secretary for Energy and Climate Policy, said: "Hungary has a strong commitment to renewables. As the next step, the government's priority is to upgrade the national grid to be capable of integrating the rapidly growing electric capacity generated by weather-dependent energy sources."

Can Hungary achieve more energy security and independence?

Hungary's transition to clean energy can enable it to achieve greater energy security and independence as it navigates the supply challenges that Russia's invasion of Ukraine has created for countries across Europe, according to a new in-depth policy review by the International Energy Agency.

What does the IEA report say about Hungarian Energy Policy?

The IEA report recommends that the Hungarian government adopt additional targets and policies to lower fossil fuel consumption, increase energy efficiency and promote investment in clean energy technologies, skills and jobs.

Does Hungary have a strong energy transition?

Hungary has a strong starting point for its energy transition thanks to rapid growth of solar PV and a solid base of nuclear power. But it still has considerable work ahead to achieve its objectives for emissions reductions and energy sovereignty.

What does the IEA review mean for Hungary?

The IEA review calls on Hungary to reduce fossil fuel consumption and diversify its energy sources towards a broader portfolio of renewables by drawing on the considerable potential of its wind and geothermal energy resources as well as extending the lifetime of existing reactors, where safety

permits.

Can Hungary develop hydrogen for industrial sectors?

“Hungary has a huge opportunity to develop hydrogen for industrial sectors. Continued investment in developing its solar PV, geothermal and wind resources will allow Hungary to reduce its reliance on natural gas and coal in both heating and power generation.

The Way Ahead for Green Energy in Hungary

In the long term, Hungary aims to complete a EUR 16 billion investment plan in alternative energy by 2030, Steiner explained. That includes some 31 sub-projects and would cover the bulk of the country's climate-neutrality goals.

Hungary's clean energy transition is the key to reach energy

Hungary's transition to clean energy can enable it to achieve greater energy security and independence as it navigates the supply challenges that Russia's invasion of Ukraine has created for countries across Europe, according to a new in-depth policy review by the International Energy Agency.
