Can aluminium redox cycles be used for energy storage?

Aluminium redox cycles are promising candidates for seasonal energy storage. Energy that is stored chemically in Al may reach 23.5 MWh/m<sup>3</sup>. Power-to-Al can be used for storing solar or other renewable energy in aluminium. Hydrogen and heat can be produced at low temperatures from aluminium and water.

Could aluminum be the key to a redox cycle?

Aluminum, used in a redox cycle, has a massive energy density. Swiss researchers believe it could be the key to affordable seasonal storage of renewable energy, clearing a path for the decarbonization of the energy grid.

What is the feasibility study of aluminum based energy storage?

To provide the correct feasibility study the work includes the analysis of aluminum production process: from ore to metal. During this analysis the material and energy balances are considered. Total efficiency of aluminum-based energy storage is evaluated. Aluminum based energy generation technologies are reviewed.

What is aluminum based energy storage?

Aluminum-based energy storage can participate as a buffer practically in any electricity generating technology. Today, aluminum electrolyzers are powered mainly by large conventional units such as coal-fired (about 40%), hydro (about 50%) and nuclear (about 5%) power plants , , , .

When will aluminium be used for energy storage?

Although it is possible that first systems for seasonal energy storage with aluminium may run as early as 2022, a large scale application is more likely from the year 2030 onward.

How much energy can be stored in aluminium?

Energy that is stored chemically in Al may reach 23.5 MWh/m<sup>3</sup>. Power-to-Al can be used for storing solar or other renewable energy in aluminium. Hydrogen and heat can be produced at low temperatures from aluminium and water.  $\approx 500$  kg Al are needed for a 100% solar PV supplied dwelling in Central Europe.
