

## European Solar and Energy Storage Solutions

# Industrial Park Photovoltaic Panel Project

智慧能源储能系统  
Intelligent energy storage system

## Overview

---

What is the SEG Indonesia PV industrial park project?

Located within Grand Batang City, in Central Java Province, Indonesia, the SEG Indonesia PV industrial park project will have an investment exceeding \$500 million USD and will cover over 40 hectares. The overall plan for the park includes a vertical integration capacity of 5GW for silicon wafers, 5GW for solar cells, and 5GW for modules.

Where is a large-scale photovoltaic industrial park located?

This study focuses on the large-scale photovoltaic industrial park in the desert area of Gonghe County, China. By conducting field research, long-term monitoring, and experimental analysis, evaluation indicators are selected from various aspects including population, economy, society, and natural factors.

Will a rooftop PV system meet the industrial park's needs?

Sungrow said the installation should meet 100% of the industrial park's needs. Traditional rooftop PV is the easiest solution for commercial and industrial (C&I) companies to reach their emissions reduction targets, said Arctec.

How many GWh will a PV plant generate a year?

“Located in the industrial park covering 43 rooftops, the PV plant is expected to generate 110 GWh per year, powering the industrial park facilities and feeding the excess electricity it produces into the grid as one of the grid-parity projects,” Sungrow said in a statement.

What's going on at SEG's upcoming photovoltaic industrial park?

The park is anticipated to include factories for the production and assembly of silicon ingots, wafers, cells, and modules and is set to become Southeast Asia's largest photovoltaic industrial park to date. SEG's Founder and COO, Jun Zhuge, and Ngurah Wirawan, President Director of Grand Batang City, attended the ceremony.

How many mobile meteorological stations are there in a solar photovoltaic park?

This study included five mobile meteorological stations (MMSs), three fixed meteorological stations (FMSs), and one carbon flux monitoring station (CFMS) within the solar photovoltaic park (SPP). WPS refers to the built operation area on the site, while TPS denotes the transition area that is to be constructed.
