Installation angle and orientation of photovoltaic panels

Overview

For maximum output, the sweet spot for solar panels in the continental U.S. is facing roughly south and tilted between 15 and 40 degrees, according to the Department of Energy.

Think of your panel's orientation as the direction it's facing in terms of north, south, east and west. The angle is how flat (lying on its back and facing straight up) or tilted your panel is.

In general, solar panels should be installed to where the sunlight hits them at as close to a perpendicular 90-degree angle for as long as possible during the day.

To take maximum advantage of solar radiation, it is advisable to orient the solar panels towards the south if we are in the northern hemisphere and the north if we are in the southern hemisphere.

For most homeowners, the optimal angle for solar panel installation is near or equal to the latitude of your home, typically ranging between 30 and 45 degrees.
