If you're considering installing a new solar hot water system on your home's rooftop as an alternative to traditional heating options, then undoubtedly, some of the burning questions on your mind are about the differences between a passive and active solar thermal systems, costs, and pros and cons of each option.

Solar water heaters -- sometimes called solar domestic hot water systems -- can be a cost-effective way to generate hot water for your home. They can be used in any climate, and the fuel they use -- sunshine -- is free. How They Work. Solar water heating systems include storage tanks and solar collectors.

These systems use the sun's energy to heat water, reducing your reliance on fossil fuels and lowering your utility bills. In this guide, we'll explore how solar hot water systems work, their benefits, and what you should consider before installing one.

If you're considering installing a residential or commercial solar panel system, you might wonder if your roof type is appropriate for a solar installation. The good news is that solar panels can be installed on just about any roof type, but the installation process and mounting hardware might vary from material to material. Can a solar hot water system be installed on a roof?

Solar hot water system on the roof of a house. To get right to the bottom line, here are the average costs of having a completely new solar hot water system installed on a typical residential rooftop.

Should you install solar panels on your roof?

Installing solar panels on your roof can both save you energy costs and reduce your home's environmental impact. Even though there are some DIY solar panel options, installing them is a highly complex project, and you'll still need assistance from an experienced professional.

Can a solar water heating system be installed on a building site?

If your building site has unshaded areas that generally face toward the equator (to the south in the US) , it's a good candidate for a solar water heating system. Your local solar system supplier or installer can perform a solar site analysis. Shading by surrounding trees or other buildings should be avoided.

How to choose a solar water heating system?

Before you buy and install a solar water heating system, you need to first consider the characteristics of your site: available roof or land area, the solar resource, shading by trees or buildings, as well as the optimal orientation and tilt of your solar collector.

Can you re-roof around solar water heating collectors?

It is possible to re-roof around solar water heating collectors, but new solar systems should be installed on new or sound roofs that will not need to be replaced in the 25- year life of the solar system. It is often necessary to reinforce the roof structure with blocking between rafters.

Which roof is best for solar panels?

No one type of roof is best for solar panels – mounting solutions exist for just about every roof out there. Some roofs will cost more to mount solar panels on. This is due to the different equipment installers need to use. Start comparing customized solar quotes today on the EnergySage Marketplace.
