Installing solar panels can lower your electricity costs, reduce your tax bill, and offer healthy future returns. But there's a lot to consider before you plug into the sun.

Solar panels are more efficient, affordable, and environmentally friendly than they've ever been, and the 30% federal tax credit makes solar an even more attractive investment for homeowners.

Home solar technology offers electricity bill savings, more energy independence, and resilience in the face of an increasing rate of power outages. Should you install solar?

"It depends on what is motivating the household to make the decision to [install] solar," Becca Jones-Albertus, director of the US Department of Energy Solar Energy Technologies Office, told CNET. If you're looking to be 100% energy independent or live off the grid, solar could be a good way to reach those goals.

Why should you install solar panels?

Solar is also a renewable source of energy, meaning that the sun's power won't deplete as we use it to make solar electricity. The sun's energy will never "run out" - so you can always take advantage of it without hurting the earth! Homeowners who install solar panels have a lower carbon footprint and help in the fight against climate change.

Should you choose solar energy for your home?

Before starting the process of powering your home with solar energy, homeowners should investigate their energy use and consider potential efficiency upgrades. Homeowners should be well aware of their total

electricity usage, and consider low-cost and easy-to-implement efficiency measures before choosing solar.

Are solar panels a good option for your home?

Residential solar panels allow you to pull less energy from the grid. With the addition of solar batteries, solar panels could make your home self-reliant and independent from the electric grid. Solar batteries store energy created during sunny hours, allowing it to be used at night or on cloudy days.

Is solar energy a good investment?

Solar energy saves money in the long run, but one of the main disadvantages is the initial installation cost of the whole array, which could easily reach \$15,000 or more. Although solar power cuts off your monthly electricity bills instantly, the return on the investment comes after several years.

Should I add a solar energy system to my roof?

You may be considering the option of adding a solar energy system to your home's roof or finding another way to harness the sun's energy.
