Medium voltage photovoltaic panel installation tips

Overview

The Renewable Energy Ready Home (RERH) specifications were developed by the U.S. Environmental Protection Agency (EPA) to assist builders in.

EPA has developed the following RERH specification as an educational resource for interested builders. EPA does not conduct third-party.

The builder should install a 1" metal conduit from the designated inverter location to the main service panel where the system is intended to be tied into the home's electrical service. The conduit should be capped and.

These specifications were created with certain assumptions about the house and the proposed solar energy system. They are designed for builders constructing single family homes with.

Builders should use EPA's online RERH SSAT to demonstrate that each proposed system site location meets a minimum solar resource potential.
