What policies have been implemented to promote the development and adoption of microgrids?

Several countries have implemented policies to promote the development and adoption of microgrids. In the United States, the Federal Energy Regulatory Commission (FERC) has implemented Order-2222 , establishing rules enabling microgrids to participate in wholesale energy markets.

Are microgrids a state program?

Several states have enacted legislation to include microgrids under existing state programs and incentives. The Connecticut legislature, in particular, has worked to wrap microgrids into state policies designed to support a variety of energy investments for both public and private entities.

How does government support microgrids?

Support for microgrids comes from research and development (R&D) programs at federal and state levels, software and tools, grants and funding support to incentivize demonstration projects, and tax and financial incentives for the installation of distributed energy [2, 3, 6, 126].

Should lawmakers support microgrid development?

As lawmakers in other states consider whether to support microgrid development, it's important that policies consider the full value and reflect the suite of benefits that microgrids can provide the power grid to harness their full potential.

Why are regulatory and policy frameworks important for microgrids?

Regulatory and policy frameworks are crucial in facilitating the growth and acceptance of microgrids. However, several challenges related to these frameworks need to be addressed. One of the primary issues is the variation in regulations that govern microgrids across different countries and states.

What are the standards for Microgrid controllers?

Another key standard in the IEEE 2030™ series is IEEE 2030.7™, which provides technical specifications and requirements for microgrid controllers and reliability. It offers a comprehensive description of the microgrid controller and the structure of its control functions, including the microgrid energy management system.
