Power System Studies

Power Flow Study (aka Load Flow) is electrical analysis used during design phase. It has a big influence on Protective Device Coordination, equipment sizing (transformers, cables, breakers, fuses, switchgears). Main goal is to find answer about: current, voltage, and power flow in the electrical system under multiple modes of operation; influence on equipment size and operation

About Us

MR Power Systems, your trusted electrical engineering experts dedicated to enhancing electrical safety and efficiency in the EMEA region customers. Our mission is to enhance electrical safety, educate individuals and businesses, and attain a position as one of the leading companies in electrical calculations.
