## Overview

---

How much solar irradiation does Norfolk Island experience?

Norfolk Island experiences solar irradiation levels reaching approximately 4.81 kilowatt-hours per square metre per day on average over a year. The following graph shows solar irradiation/output levels per kilowatt of installed solar panels in the 2899 area per month.

How much energy does Norfolk Island generate a year?

Based on a conservative average of 7,139 kWh of energy production a day (enough to power the equivalent of 446 homes) and retail electricity costs of 0c per kilowatt-hour; Norfolk Island and 2899 postcode area residents are collectively generating \$0 of energy at retail prices a year!.

What angle should a rooftop solar panel be installed in Norfolk Island?

Rooftop solar panels installed in Norfolk Island, should generally face North for the best results. For a good panel angle, the general rule of thumb is it should be around the same as latitude.

Why is Norfolk Island transitioning to green energy?

Norfolk Island is transitioning to green energy to reduce its dependence on diesel-fired generation, which is becoming more expensive and more difficult to source as countries around the world seek to decarbonize their economies. This initiative is comprised of several interrelated elements: Project Background.

What is Norfolk Island's diesel-fired generation initiative?

This initiative is comprised of several interrelated elements: Project Background In 2022, the Commonwealth Government provided a \$5.25 million grant to Norfolk Island Regional Council to transition the island away from diesel-fired generation.

How many watts are there in Norfolk Island?

In Norfolk Island's postcode area (2899), more than 555 small-scale systems have been installed with a collective capacity of 1,770 kW as at February 28, 2023. Given a population of 1,849, this works out to 957 watts per person in the area, compared to a 827 watts Australian average.
