Off Grid and On Grid Solar Photovoltaic Systems

Off-grid systems are not connected to the national grid and require battery storage and a back-up generator to provide electricity during nights and cloudy days. Hybrid systems combine the best from on-grid and off-grid systems, which can be described as: On-grid with extra battery storage; or Off-grid solar with utility backup power.

Solar system types compared: Grid-tied, off-grid, and hybrid

Grid-tied solar systems. Grid-tied systems are solar panel installations that are connected to the utility power grid. With a grid-connected system, a home can use the solar energy produced by its solar panels and electricity that comes from the utility grid. If the solar panels generate more electricity than a home needs, the excess is sent to the grid.
