## Overview

---

What is oxtto energy?

OXTTO Energy - OXTTO has developed a new generation flywheel energy storage technology that can deliver safe, scalable energy storage at a competitive cost. The flywheel is suitable for very fast respon.

What is oxtto flywheel energy storage?

OXTTO has developed a new generation flywheel energy storage technology that can deliver safe, scalable energy storage at a competitive cost. The flywheel is suitable for very fast response time applications across the world, and it will improve flexibility and reliability of power systems.

What is oxtto energy inertia drive?

Image: OXTTO Energy INERTIA DRIVE (ID) THE NEXT GENERATION FLYWHEEL  
The Inertia Drive technology is based on the flywheel mechanical battery concept that stores kinetic energy in the form of a rotating mass. Our innovations focus on design, assembly and manufacturing process.

Where is oxtto Energy headquartered?

OXTTO Energy is headquartered in Kent, United Kingdom. What is the size of OXTTO Energy?

OXTTO Energy has 6 total employees. What industry is OXTTO Energy in?

OXTTO Energy's primary industry is Other Equipment. Is OXTTO Energy a private or public company?

OXTTO Energy is a Private company. What is OXTTO Energy's current revenue?

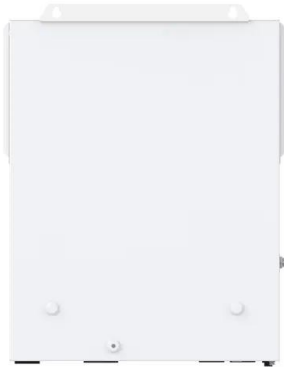

.

How will oxtto energy regenerative braking work?

The system will also create power system stability and enable less diesel fuel consumption. OXTO Energy will be integrating our flywheels into a regenerative braking system which will recover energy from the slowing trains by converting its kinetic energy into electricity.

### **OXTO Energy: A New Generation of Flywheel Energy**

...

OXTO will install an 800kW flywheel energy storage system for a tea manufacturing company in Kenya. The OXTO flywheel will operate as UPS system by covering both power and voltage fluctuation and diesel genset trips ...

### **OXTO Energy**

OXTO has developed a new generation flywheel energy storage technology that can deliver safe, scalable energy storage at a competitive cost. The flywheel is suitable for very fast response time applications across the world, and it will improve flexibility and reliability of power systems.

### **Products and Equipment from OXTO Energy , Energy XPRT**

OXTO Energy - Flywheel Container Units can be connected in clusters of 8 units (500 kW) on the same DC bus of 528V-833 V DC or can be used individually in 65 kW x n configurations. It is a modular system with no limit in its scalability from kW to

### **OXTO Energy**

OXTO Energy's purpose is to radically transform the way energy is stored in order to meet the

worlds' ever-increasing demand for more and cleaner energy. OXTO has developed a new clean mechanical battery, made of steel totally recyclable, climate agnostic and with unlimited cycles, to deliver safe, scalable and lowest cost power storage

## OXTO Energy

OXTO Energy has developed the innovative in energy storage system to enable a sustainable, low-carbon future. A flywheel is considered a mechanical battery that stores kinetic energy in the form of a rotating mass. Designed to work alongside renewable technologies such as wind and solar, the flywheel allows intermittent renewable generation to

## **OXTO Energy - Flywheeling into the 21st century**

OXTO has developed and patented a new flywheel energy storage device that will deliver safe, scalable storage at a competitive cost, with high energy density and low physical footprint. The flywheel stores kinetic energy in a vacuum in the form of a rotating mass, then it converts it back into electricity using an efficient switching mechanism.

## **Oxto Energy**

Oxto Energy is a technology development company that has developed a flywheel based patented energy storage system that is claimed

to provide a very high round-trip efficiency. The product has a modular structure and designed to operate between a 10kW and 250kW power output.

## OXTO ENERGY

OXTO Energy is a global energy storage and technology provider. Its proprietary hardware technology is focused on a completely new generation of flywheel batteries which have the potential to change energy storage for industries like manufacturing, transportation, real estate and many more by stabilising electricity from renewable intermittent

## 39. OXTO Energy

As a result, we are enabling greater integration of solar and wind energy into power grids and supporting sustainability goals. George Prassinis, an aerospace engineer with the European Space Agency and NASA, founded OXTO Energy in 2016, after creating a small

flywheel energy storage system to replace batteries used in satellite subsystems.

### OXTO LTD overview

More for OXTO LTD (10161898) Registered office address C/O BEBGIES TRAYNOR, Innovation Centre Medway Maidstone Road, Chatham, Kent, ME5 9FD . Company status Dissolved Dissolved on 14 June 2024. Company type Private limited Company Incorporated on 4 May 2016. Accounts. Last

### OXTO Energy

OXTO Energy has developed the innovative energy storage system to enable a sustainable, low-carbon future. A flywheel is considered a mechanical battery that stores kinetic energy in the form of a rotating mass. Designed to work alongside renewable technologies such as wind and solar, the flywheel allows intermittent renewable generation to

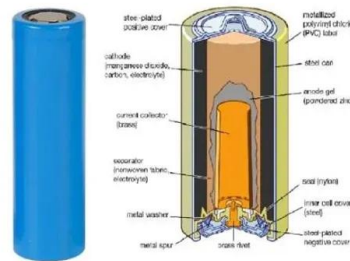

### 39. OXTO Energy

OXTO Energy provides flywheel energy storage to manufacturing, transportation, construction, and data processing industries, helping support their transition towards a low-carbon economy. Our proprietary hardware technology focuses on developing next-generation flywheel batteries capable of revolutionising energy storage by stabilising

## OXTO Energy: A New Generation of Flywheel Energy Storage

OXTO will install an 800kW flywheel energy storage system for a tea manufacturing company in Kenya. The OXTO flywheel will operate as UPS system by covering both power and voltage fluctuation and diesel genset trips to increase productivity. The system will also create power system stability and enable less diesel fuel consumption.

## OXTO Energy

The company's system stores kinetic energy in the form of a rotating mass, offering intermittent renewable generation to continue generating even when the energy is not necessarily required and excess energy gets stored, enabling utility grid operators to get low-cost and environmentally friendly renewable energy at the time of need.
