(total system cost). In the 2030 renewables scenario, the FlexTool finds it cost-efficient to invest in 1.7 GW of additional solar PV capacity and 164+ investments MW (82 MWh) of battery storage, increasing the renewable energy share from 58% to 69%. 2 In the case of Panama, the expansion includes solar PV and wind capacity and battery storage.

Battery import costs and recycling challenges could hamper long-term growth in LAC. Growth in NCRE goes hand in hand with storage and ancillary services (e.g., reserve power, voltage regulation, variable frequency drives). Pumped thermal storage Virtual reservoir Flow batteries replacing lithium Ion Energy Storage as a Service Liquid-air energy .

Although storage is still underdeveloped, with high investment costs and lack of regulations, ASEP's recent consultation, plus a recent 500 MW tender announced by the Panamanian government that includes storage, are positive signs for the industry.

Are battery storage systems a viable alternative to solar?

Steadily improving economic viability has, in turn, opened up new applications for battery storage. Like solar photovoltaic (PV) panels a decade earlier, battery electricity storage systems offer enormous deployment and cost-reduction potential, according to this study by the International Renewable Energy Agency (IRENA).

How much energy does Panama need?

Panama expects total energy demand to more than double between 2017 and 2030 (+113%), with peak demand growing from 1.6 GW to 3.5 GW. Panama is currently connected to Costa Rica via a 300 MW transmission line. A 400 MW high-voltage direct current (HVDC) interconnector with Colombia is expected to be commissioned by 2022.

What is Panama's power system like in 2017?

In 2017, Panama's power system had very large installed hydropower capacity (54% of total capacity) and substantial VRE capacity (45.3%). The generation breakdown was 64% renewable energy (36% run-of-river hydro, 18% reservoir hydro, 8% wind, 2% solar photovoltaics (PV)) and 36% thermal generation (29% oil and 7% coal).

Will Chile pay a capacity payment for energy storage projects in 2024?

Chile passed an energy storage and electromobility bill in late 2022, making stand-alone storage projects profitable for operators. However, the market is still awaiting new rules regarding a capacity payment for storage projects—expected in 2024.
