Overview

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020.

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020.

Solar energy accounted for some 5.6 percent of electricity generation in the United States in 2023, up from a 4.8 percent share a year earlier.

In 2022, solar photovoltaics made up 4.7% of U.S. electricity generation, an increase of almost 21% over the 2021 total when solar produced 3.9% of US electricity.

In 2023, nearly 4% of electricity in the U.S. was produced by utility-scale solar. A decade earlier in 2014, it accounted for less than 0.5% of the total electricity generated.

In 2022, residential solar panels generated 37 million megawatt-hours, accounting for 18% of all solar energy in the US, according to the Energy Information Administration. What percentage of US electricity is generated by solar power?

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020. In our Short-Term Energy Outlook, we forecast that solar will account for 4% of U.S. electricity generation in 2021 and 5% in 2022.

What is the contribution of solar energy to global electricity production?

While the contribution of solar energy to global electricity production remains generally low at 3.6%, it has firmly established itself among other renewable energy technologies, comprising nearly 31% of the total installed renewable energy capacity in 2022 (IRENA, 2023).

What percentage of electricity is produced by utility-scale solar?

Utility-scale solar accounts for around 8% of the nation's capacity from all utility-scale electricity sources (including renewables, nuclear, and fossil fuels such as coal, oil, and natural gas). In 2023, nearly 4% of electricity in the U.S. was produced by utility-scale solar.

How much solar energy does a home use in 2022?

In 2022, residential solar panels generated 37 million megawatt-hours, accounting for 18% of all solar energy in the US, according to the Energy Information Administration. The average US home uses about 11,000 kilowatt hours per year, meaning residential solar panels generated enough electricity to power 3.4 million homes in 2022.

How much electricity is produced from solar and wind power?

The analysis shows that the amount of electricity produced from solar and wind power increased across the U.S. Our nation generated 238,121 gigawatt-hours (GWh) of electricity from solar in 2023 — more than eight times the amount generated a decade earlier in 2014.

How many solar power systems are there in the US?

The US had about 3.9 million photovoltaic solar power systems installed at residences at the end of 2022, according to the National Renewable Energy Laboratory. That number has grown by an average of 37% per year since Congress passed a federal tax credit for solar power in 2005.

Percentage of electricity generated by solar panels

Solar generation was 3% of U.S. electricity in 2020, but ...

According to our Electric Power Annual, solar power accounted for 3% of U.S. electricity generation from all sources in 2020. In our Short-Term Energy Outlook, we forecast that solar will account for 4% of U.S. ...

How Much Electricity Do Solar Panels Generate in ...

The tilt of solar panels affects their electricity generation. Panels should be tilted at an angle equal to your location's latitude. In Ireland, the ideal tilt angle is around 36 degrees. How much electricity do solar panels generate ...

How much solar energy do homes produce?

In 2022, residential solar panels generated 37 million megawatt-hours, accounting for 18% of all solar energy in the US, according to the Energy Information Administration. The average US home uses about 11,000 kilowatt ...

Solar power , Your questions answered , National Grid ...

According to Solar Energy UK, solar panel

performance falls by 0.34 percentage points for every degree that the temperature rises above 25°C. Plus, the longer days and clearer skies mean solar power generates much ...

Solar Performance and Efficiency , Department of Energy

The conversion efficiency of a photovoltaic (PV) cell, or solar cell, is the percentage of the solar energy shining on a PV device that is converted into usable electricity. Improving this ...

Solar energy penetration U.S. 2023 , Statista

Solar energy accounted for some 5.6 percent of electricity generation in the United States in 2023, up from a 4.8 percent share a year earlier. California was the state with the largest percentage

Electricity Mix

The chart below shows the percentage of global electricity production that comes from nuclear or renewable energy, such as solar, wind, hydropower, wind and tidal, and some biomass. Globally, more than a third of our electricity comes ...
