How do I design a solar hot water & photovoltaic system?

Provide an architectural drawing and riser diagram for the homeowner showing the planned location for future solar hot water and photovoltaic system components. Space requirements and layout for solar water heating and photovoltaic system components should be taken into account early in the design process.

Where is the drain valve on a solar water heater?

The drain valve is on the lower front of the solar water heater. Open the cold water supply to the solar water heater. **NOTE: THIS VALVE MUST BE LEFT OPEN WHEN THE SOLAR WATER HEATER IS IN USE.** Fill the solar water heater until a constant flow of water runs out an opened hot water faucet.

What is a photovoltaic solar module?

Risen's photovoltaic solar module is a DC power supply, which has the character of high reliability and nearly no-maintenance. It can be used in power systems of remote areas, home power systems, renewable energy vehicles, hydropower stations, water pumps, communication system or constitute solar photovoltaic power station directly.

How do you open a solar water heater?

Open the cold water supply to the solar water heater. **NOTE: THIS VALVE MUST BE LEFT OPEN WHEN THE SOLAR WATER HEATER IS IN USE.** Fill the solar water heater until a constant flow of water runs out an opened hot water faucet. This will let out air in the solar water heater and the piping.

What is in a solar water heater manual?

This manual contains instructions for the installation, operation, and maintenance of the solar water heater. It also contains warnings throughout the manual that you must read and understand. All warnings and all

instructions are essential to the proper operation of the water heater and your safety. READ THE ENTIRE.

Can a solar water heater be installed in a closed water system?

If a solar water heater is installed in a closed water system; such as one having a back flow preventer, check valve or water meter with check valve in the cold water supply line, means shall be provided to control thermal expansion. Contact the water supplier or local plumbing contractor on how to control this situation.
