Photovoltaic electric drill bracket drilling artifact

Overview

What is solar photovoltaic bracket?

Solar photovoltaic bracket is a special bracket designed for placing, installing and fixing solar panels in solar photovoltaic power generation systems. The general materials are aluminum alloy, carbon steel and stainless steel. The related products of the solar support system are made of carbon steel and stainless steel.

What types of solar photovoltaic brackets are used in China?

At present, the solar photovoltaic brackets commonly used in China are divided into three types: concrete brackets, steel brackets and aluminum alloy brackets. Concrete supports are mainly used in large-scale photovoltaic power stations. Because of their self-weight, they can only be placed in the field and in areas with good foundations.

What makes a good bracket system?

(6) The cost should be reasonable. A high-quality bracket system must use computer simulation software for extreme weather conditions to verify its design, and conduct strict mechanical performance tests, such as tensile strength and yield strength, to ensure the durability of the product.

What is an example of an assembled steel bracket?

The following is an example of an assembled steel bracket. First, high-quality section steel usually has a high-level galvanizing process. According to the requirements of national standards, the average thickness of the galvanized layer should be greater than 50 μ m, and the minimum thickness should be greater than 45 μ m.
