

## European Solar and Energy Storage Solutions

# Photovoltaic panel double blade betting machine

## Overview

---

Do you offer a complete set of PV machines?

We offer a complete set of PV machines covering all solar manufacturing processes. We offer complete solar panel production lines for global customers to manufacture photovoltaic modules based on their specific requirements.

Why choose our photovoltaic module manufacturing equipment?

Our photovoltaic module manufacturing equipment are the result of our research and experience, but above all of our ongoing consultation with our customers. This means the product is specifically made-to-measure to their requests and needs, assuring a very flexible operating method when defining the order and during the production process.

What is a fully automated solar module disassembly line?

The fully automated solar module disassembly line combines a 10m x 2m x 5.5m glass separator, a 2.5m x 1.7m x 1.5m frame separator and a 17.4m x 1.9m junction box separator. It has an annual capacity of 28 MW and is said to enable complete separation of glass and aluminum as well as cell and wiring material.

How are photovoltaic modules produced?

Generally speaking, photovoltaic modules are produced by the use of automated equipment, and each one is designed for a specific function in the photovoltaic module manufacturing process. Therefore we are talking about serial or in-line machines, as production follows the same method as an assembly line.

How does envie use disassembly equipment to dismantle PV panels?

“Envie will utilize our disassembly equipment to dismantle PV panels and then cooperate with Rosi, a French company that developed recycling processes

allowing to separate and recover metals such as silver and high purity silicon from the PV cells,” it further explained.
