Photovoltaic panel theft

Overview

Are solar panels a target for thieves?

While it is not extremely common, solar panels can indeed be a target for thieves. This is especially true in more remote or isolated areas where surveillance is minimal and the solar panels can be removed with less risk of being caught.

How do you secure solar panels to a roof?

To secure solar panels to a roof, you can use special anti-theft clamps and locks. These clamps require special keys to unlock. Solar panels can also be placed at the back of the house or where they are not visible from the street to reduce the risk of theft. This way, they won't attract any unwanted attention.

Can a PV module be stolen?

There are also two other key factors that affect the potential for PV module theft: PV systems have experienced dramatic growth all over the world - from inner cities to rural villages. A stolen PV module has value in resale dollars and also as a source of power for small appliances.

Can wind rip solar panels off a roof?

Wind at great speeds can actually rip solar panels off roofs where they are placed. Fortunately, leaving the panels with less of an inclination off their surfaces can prevent them from blowing off. Weather can be a significant external force impacting the performance of solar panels, but it can be managed.

Are solar panel locks a good investment?

Solar panel locks are an excellent way to secure your investment in solar energy. These security measures often involve physical barriers that are difficult to remove without specialized tools. Here are a few examples that I

recommend you look at:

Photovoltaic panel theft

Anti-Theft Solar Mounting Clips: Security For Solar Panels
