For maximum output, the sweet spot for solar panels in the continental U.S. is facing roughly south and tilted between 15 and 40 degrees, according to the Department of Energy.

For maximum output, the sweet spot for solar panels in the continental U.S. is facing roughly south and tilted between 15 and 40 degrees, according to the Department of Energy.

A rule of thumb for optimizing the angle of your solar panels is to mount them at an angle equivalent to the site's latitude, facing due south. The latitude of Normal, Illinois, is 40.5°.

Therefore, the ideal solar panel angle for your array would be about 34 degrees.

To achieve that goal, most solar panels face the equator (in the US, that means south-facing) and are installed at an angle between 30 to 45 degrees relative to the horizon.
