What is a DC combiner box?

Our DC combiner boxes offer users the possibility to integrate short-circuit and overvoltage protection, as well string monitoring solutions (I, V, T and SPD and switch isolator status), for PV systems using central inverters with PV panels in trackers and fix tilt systems.

What is a combiner box in a photovoltaic system?

In a photovoltaic system, a combiner box acts as a central hub that consolidates and manages the direct current (DC) output of multiple solar panels. Its main purpose is to simplify the wiring structure, enhance system security and simplify maintenance procedures.

How many string inverters can a combiner box collect?

The combiner boxes allow to collect from 2 up to 6 string inverters in one single cabinet. They withstand ambient temperatures from  $-20$  up to  $+50^{\circ}\text{C}$  to operate in hardest climate conditions, fulfilling the highest market standards as per IEC 61439-2 ed 3.0:2020.

How do string combiner boxes work?

Data from string combiner boxes is output via serial RS-485 interfaces and transmitted wirelessly to the central park management system. Our proven wireless technology enables reliable, interference-free communication over a distance of up to 500 m with up to 250 string combiner boxes.

Can a combiner box be upgraded?

As the number of panels or inverters changes, the combiner box can be easily configured or upgraded to meet changing system requirements. Make sure the combiner box is sized appropriately for the number of strings or panels in the solar array. This prevents overloading and optimizes the performance of the box.

What is an advanced combiner box?

Advanced combiner boxes may include monitoring and communications capabilities. These can provide real-time data on individual panel performance, allowing for proactive maintenance and troubleshooting. In small installations, the solar panels are arranged in a single string, often using a string combiner box.
