Portable solar power station

Overview

What are solar powered portable power stations?

These solar-powered portable power stations keep your batteries full during power outages and off-grid campouts. These days, gas-powered generators aren't the only option for charging on the go. Solar-powered generators—also called portable power stations—are a growing sector of the power market.

Are portable solar panels compatible with my portable power station?

There are two specs to check for when looking to see if your portable solar panel is compatible with your portable power station: power potential and connector/port compatibility. Portable solar panels aren't all that smart. Whatever blast of sun they are getting will be transmitted directly as power to your power station.

Are portable solar panels smart?

Portable solar panels aren't all that smart. Whatever blast of sun they are getting will be transmitted directly as power to your power station. So before you purchase a portable solar panel, first look at your power station to see how much solar input it can handle.

How do you charge a portable solar power system?

Other people use them to power speakers while tailgating, or integrate them into van build projects. Most portable solar power systems — aka solar generators, power stations, portable power banks or battery boxes — can be charged via solar panels, a wall plug or a 12-volt car outlet.

Do solar panels need a power station?

Solar panels without a power station are not particularly useful, so the term “solar generator” typically refers to both the panels and the station used in conjunction. What Size and How Much Capacity Do You Need?

One of the main differences in these models is how much charging “juice” they can store, referenced in watt-hours.

Should you buy a portable power station?

Larger units can also provide peace of mind in areas where power outages are a concern. Depending on output, many of these portable power stations can sustain household appliances the way a gas generator would. Run out of juice?

Attach a few solar panels and you’ll start recharging the power station immediately— no emergency fuel run necessary.
