# Prices of photovoltaic panels in previous years

## Overview

---

IRENA presents solar photovoltaic module prices for a number of different technologies. Here we use the average yearly price for technologies 'Thin film a-Si/u-Si or Global Price Index (from Q4 2013)'. IRENA (2024); Nemet (2009); Farmer and Lafond (2016) - with major processing by Our World in Data.

Evolution of solar PV module cost by data source, 1970-2020 - Charts - Data & Statistics - IEA. Create a free IEA account to download our reports or subscribe to a paid service.

This report helps fill this need by providing a high-level overview of past, recent, and projected near-term PV pricing trends in the United States—focusing on the installed price of PV systems (i.e., the upfront cost borne by the system owner in terms of dollars per watt).

Solar photovoltaic costs have fallen by 90% in the last decade, onshore wind by 70%, and batteries by more than 90%. One of the most transformative changes in technology over the last few decades has been the massive drop in the cost of clean energy.

Solar panels in 2010 cost about \$8.70 per watt and were about 15% efficient. Today, solar panels cost about \$3.00 per watt on average and are between 19% and 22% efficient. The price of solar panels could continue to drop, but it can depend on technology, market conditions, and government policies and programs. Are solar PV prices going down?

Nonetheless, rapid price declines in solar PV have not been without controversy. China, for example, has played an outsized role in scaling up the mass production of solar PV cells and modules, comprising 78% of global production in 2021 9, 10 (Fig. 1).

How has photovoltaic efficiency changed over time?

Since their inception in the 1950s, photovoltaic efficiency over time has shown remarkable improvement, transforming solar energy from a niche technology to a mainstream power source. In the early days, solar efficiency over time was relatively low, with panels converting only about 6% of sunlight into electricity.

How has residential solar changed over the last decade?

The evolution of residential solar over the last decade has been astonishing, to say the least. In 2024, solar panels are cheaper and more efficient than ever!.

How much does a solar installation cost in 2024?

In 2024, the average cost of a solar installation is about \$19,000, or \$3.00 per watt, before any incentives are factored in. The industry standard for efficiency is between 19% and 22%, but we're beginning to see more panels with efficiency ratings above 22%. Some are even close to breaking 23%!.

How has solar panel efficiency changed over time?

As solar panel efficiency over time continues to improve, these benefits become more pronounced, driving further adoption and technological advancement in the renewable energy sector. Solar panel efficiency has dramatically improved since the technology's inception, driving widespread adoption of photovoltaic systems.

Are solar PVs cheaper than fossil fuels?

Over the past 40 years, solar photovoltaic (PV) prices have fallen by over two orders of magnitude, and during the period 2010 to 2021, the global weighted-average levelized cost of energy of newly commissioned utility-scale solar PVs fell by 88% (ref. 5), making solar PVs cheaper than fossil fuel power in some parts of the world.

---

### Solar Panel Costs in the UK: 2024 Prices

A 4kW solar panel system is suitable for the average home in the UK and costs around £5,000 - £6,000.; The estimated average yearly savings you can expect with a solar panel system range from £440 to £1,005.; If you install a 4kW ...

### The price of solar electricity has dropped 89% in 10 years

Comparing the price of electricity from new power plants in 2009 and 2019, one graph shows how the price of solar photovoltaic power (from solar panels) plummets from \$359 per megawatt

### Why did renewables become so cheap so fast?

Ben Zientara (2020) - How much electricity does a solar panel produce? Updated version from 4/2/2020. This is the price per watt multiplied by the output of today's typical solar panel: 320W \* 1865\$/W= \$596,800. The ...

### Solar panel prices have fallen by around 20% every ...

Solar photovoltaic costs have fallen by 90% in

the last decade, onshore wind by 70%, and batteries by more than 90%. One of the most transformative changes in technology over the last few decades has been the ...

## How Has The Price And Efficiency Of Solar Panels Changed Over ...

By 2024, solar panel costs have decreased significantly, with prices averaging around \$3 per watt for residential installations. This decline reflects ongoing advancements in technology and economies of scale. ...

## Photovoltaic (PV) Pricing Trends: Historical, Recent, and Near ...

This report helps fill this need by providing a high-level overview of past, recent, and projected near-term PV pricing trends in the United States--focusing on the installed price of PV ...

## Documenting a Decade of Cost Declines for PV Systems

The last decade has shown a sharp, though now steadying, decline in costs, driven largely by photovoltaic (PV) module efficiencies (now 19.5%, up from 19.2% in 2019) and hardware and inverter costs.
