# Rental price under photovoltaic panels

## Overview

---

Leasing solar panels costs \$50 to \$250 per month on average, with most contracts lasting 10 to 25 years and monthly payment amounts increasing yearly.

Leasing solar panels costs \$50 to \$250 per month on average, with most contracts lasting 10 to 25 years and monthly payment amounts increasing yearly.

For solar leasing, customers pay monthly rent for the panels and get access to all of the energy the panels generate; with a PPA, customers instead pay per kilowatt-hour (kWh) of energy generated, so they effectively still pay an electric bill, but usually at a slightly discounted rate and mostly for electricity coming from the panels.

Solar panel leases cost between \$50 and \$250 per month, on average. The exact amount the homeowner pays depends on the amount of energy they use at home, the company supplying the lease, their location, and their credit score. The customer can choose between a number of financing options that best suit their needs.

The average solar panel system in the U.S. will cost somewhere between \$13,200 and \$15,000 after the federal solar tax credit is applied. That's not pocket change. So, while solar is still expensive, the lower price makes it possible to take out a loan to cover costs.

Choosing the right solar panel financing option will make going solar more affordable and extend your long-term benefits. A solar lease can help you avoid hefty up front installation costs and enable you to benefit from energy savings sooner. Should you buy or lease a solar panel?

Choosing the right solar panel financing option will make going solar more affordable and extend your long-term benefits. A solar lease can help you avoid hefty upfront installation costs and enable you to benefit from energy savings sooner. However, it can also negatively impact solar incentive savings and home value.

Does a solar lease cover a roof penetration warranty?

As well as covering the costs of the solar panel system, most solar lease suppliers also cover a roof penetration warranty. In some parts of the US, the weather is notoriously unreliable, which means solar panels can generate more energy on some days compared to others.

Can you sell a solar system under a lease?

Under a solar lease, you won't own your solar system, but will still benefit from its generated electricity. A leased solar system can make selling your home more difficult because the next owner may not want to take over your lease payments. What is a solar lease?

.

Are solar panels a good investment?

Although the panels are owned by the solar lease company, the homeowner is entitled to all of the electricity that the panels produce. However, the user will also have to pay the company a monthly fee for the solar panels - so the energy savings won't be as rewarding, compared to panels bought outright.

Should you buy a solar panel with a cash purchase?

A cash purchase also makes you eligible for all solar incentives that help reduce solar panel costs. For example, you can use the federal solar tax credit to write off up to 30% of installation costs and apply the savings to your federal tax liability.

Should you lease solar panels if you're moving to a new home?

Customers who choose to lease solar panels may find themselves in circumstances where they want to end their lease, such as if they are moving to a new home or they find that the lease payments plus electricity from the grid — if their system wasn't sized properly — end up costing them more.
