Replace the pulley of Fengjun generator

 **LFP 280Ah C&I**

Overview

How do you tie a generator pulley?

Remove the generator's starter to access the rope inside it. Pull out the rope to access the knot used to tie it to the pulley. Lock the pulley into place by inserting a screwdriver inside it. Make sure it doesn't unwind since you'll be needing the end with the knot.

How do I replace a broken pulley?

If it is broken or cracked, you need to replace it with a new one in the following steps: Pull the pull cord completely out of the pulley. Insert a screwdriver in the pulley to lock it in place. Remove the rope from the pulley then release the recoil spring by releasing the screwdriver inserted in the previous step.

How do you replace a rope pulley?

Cut off the knot of the old rope then replace it with the new rope making a small and tight knot with it. Release the pulley by pulling out the screwdriver while holding onto the rope. The recoil spring should pull the new cord inside it. Pull it out slowly then release to gauge if it works correctly this time.

How do you remove a recoil spring from a pulley?

Pull the pull cord completely out of the pulley. Insert a screwdriver in the pulley to lock it in place. Remove the rope from the pulley then release the recoil spring by releasing the screwdriver inserted in the previous step. Remove the friction plate by loosening the center bolt.

What is the role of a Vaz generator pulley?

What is the role of the VAZ generator pulley The operation of the vehicle is associated with a continuous movement of the crankshaft, the work of which can be disturbed even due to minimal fluctuations. The generator pulley provides its protection and reduces the noise that occurs when the belt drive

moves.

Can a seized piston cause a generator rope to stop working?

If the piston becomes seized, it can cause the generator rope to stop working. This can happen if the engine is run without oil, which can cause the piston to overheat and seize up. A seized piston can be a serious problem, as it can cause significant damage to the engine.
