S photovoltaic panels are installed

Overview

The five main steps to installing a solar panel system include an engineering site visit, permits and documentation, ordering equipment, the solar panel installation, and approval and interconnection.

The five main steps to installing a solar panel system include an engineering site visit, permits and documentation, ordering equipment, the solar panel installation, and approval and interconnection.

Professional technicians install the solar panels, typically taking one to three days. Local authorities inspect the system, and once approved, your solar panels are connected to the grid.

These PV systems are installed on or near homes and buildings and at utility-scale power plants that have at least 1 megawatt of electric-generation capacity.
