# Saint Pierre and Miquelon solar wind hybrid controller

## Overview

---

Which charge controller is suitable for wind generators & solar panels?

This 12/24V hybrid charge controller is suitable for wind generators (800w) and solar panels (600w). The wind controller is charged with MPPT booster technology; this means that the wind turbines will be charged effectively and continuously even if the wind blows slowly. However, PWM technology is used to charge Solar panel charge controllers.

Will a hybrid charge controller work on a wind turbine?

Many charge controllers are made specifically for wind turbines or solar panels and will not work when installed with the incorrect infrastructure. A hybrid charge controller will allow you to charge batteries from both your turbines and panels.

What is a 12/24v solar wind hybrid charge controller?

This 12/24V waterproof solar wind hybrid charge controller is made up of aluminum alloy and can operate with a 400/800W wind turbine controller and 500/1000W of a solar generator.

Running through a hybrid charge controller allows you to use both solar panels and wind turbines to charge your battery bank, presuming both are receiving enough sun or wind to generate electricity. Why is it good to have both solar panels and wind turbines?

## Wind Solar Hybrid System

Wind-solar hybrid systems above the 5000W model are charged through solar and wind controllers. Wind turbines above 3kW consist of a three-phase alternator, so a separate controller is required to convert it to direct current. The battery pack is the only intersection between the 2 power generation methods. Therefore, battery

choice is very
